Critical Thinking & Creative Problem-Solving

Thinking Outside the Box

Many breakthroughs and discoveries in art, science, research and innovation are a result of combining critical and creative thinking. The ability to think critically and creatively is essential skill sets in the resolution of problems and issues in the workplace.

This one day training workshop will introduce participants to the principles, processes and approaches to critical and creative thinking and explore how, when used together, they can prove to be beneficial in finding solutions to problems and elevating the decision-making process.

Participants will:

- Define the differences between critical thinking and creative thinking
- Explore the mindset of effective critical thinkers
- Learn how to frame problems and formulate effective decision criteria to arrive at the best solution to a problem utilizing critical thinking and creative thinking strategies
- Apply critical thinking and creative problem-solving methods to workplace situations
